DRAWING MANAGEMENT

Standards & Requirements		
CATEGORY	SPECIFICATION	EXAMPLE/COMMENTS
Location of the documents		
File Drawing Transfer		
Document Properties		
File name	Building Number_Floor	MN101_001.dwg
0,0 Location	No grid: Origin should be placed at the center of the lower left column in the floor plan. No grid: Origin should be placed at the center of the lower left column in the floor plan. If it is unclear: Origin should be placed at the intersection of lines projected vertically from the leftmost column and horizontally from the lowest column.	
Units	Architectural / Inches 1:8	
Text format	Style: Standard Type: Text (No Mtext) Justify: Middle Center Height: 8 7/8" Width: 1	
Elements	Set By Layer	
3D Elements	None or Flatten	
Layouts	None	
Purged/Audit	All the drawing	
Layer Standards		
SV-ZONE	Interior Gross Area: This layer must contain a single closed polyline representing the boundary area of the floorplan. Polylines with different "normal" or "normal vectors" are not supported. Serraview does not support multiple zones on a single floorplan. We recommend inserting a polyline linking the two zones and then this will be drawn as a single zone. Color by: Magenta Polyline	
SV-SPACE	i.e. every office, cube, kitchen, elevator shaft, toilet, etc. must have its own polyline on this layer. Polylines with different "normal" or "normal vectors" are not supported. All SV-SPACE polylines must be within the	
SV-TXT-TYPE	Space Type: This layer must contain a text object positioned within each space polygon containing the Space Type for that space e.g. Workstation. The Space Type will need to match one of the Space Types that have been configured in Serraview's Mapping Hierarchy. If a match cannot be found (or the layer is not provided), Serraview will code the Space Type as "Untyped". The center-point of the text object must be within the boundaries of the appropriate SV-SPACE polyline. Color by: Yellow Text	
SV-TXT-SPACE NAMES	Space IDs: This layer must contain a text object positioned within each space polygon containing the unique name for that space e.g. WS.6.001. The center-point of the text object must be within the boundaries of the appropriate SV-SPACE polyline. Color by: Blue Text
